

Ontada offers two programs for developers through our Certified API Developer Program and the Value Add Developer Program.

Both programs include access to iKnowMed API FHIR resources that allow you to search and retrieve data based on the data categories under the Common Clinical Data Set as defined by the 2015 Edition ONC Certification criteria are for our Certified API Developer Program.

More information on the 2015 Edition ONC Certification can be found [here](#).

All the FHIR resources offered are based on STU3 or FHIR R4. The entire list of resources and additional documentation for each resource under the iKnowMed API can be found [here](#).

FHIR resources under the Certified API Developer Program include:

- Allergy Intolerance
- Capability Statement
- Care Team
- Care Plan
- Condition
- Device
- Diagnostic Report
- Document Reference
- Immunization
- Goal
- Location
- Patient
- Practitioner
- Procedure
- Provenance
- Observation
- Organization
- Medication
- Medication Request
- Binary

Additional FHIR resources are available through the iKnowMed API as part of our Value Add Developer Program.
