Ontada is committed to empowering partners to integrate into the iKnowMed workflow and make the entire process as simple and frictionless for users as possible.

We have created two programs to facilitate this development work through our Certified API Developer and Value Add Developer programs.

Certified API Developer Program

This program is for apps that will use resources found under our Certified API grouping. Applications will only have read-only access to our Certified APIs. Developing apps through our Certified API Developer Program will have a shorter validation and activation process.

Value Add Developer Program

This program is for apps that will use resources from our Certified API grouping and additional resources that our iKnowMed EHR platform provides. There is a more in-depth security and app review process.

The Value Add Developer Program includes:

- Sandboxes, richer test data sets, and other tools

- Access to additional APIs beyond certified APIs

- Several options for workflow integration in iKnowMed

- Ability to publish in the Ontada Marketplace

- Support from Ontada's experts to leverage our APIs and distribute your product

The Value Add Developer Program is currently accessible by invitation only.

Additional Resources
